

CASE STUDY

Are you able to leverage a discovery repository for multiple matters involving the same data? If not, you could be wasting time and money.

A Fortune 100 financial services organization faced a government investigation that required **terabytes of data to be processed in a condensed timeframe.**

With Mindseye, the organization was able to process **4.9 TB of data** (5.2 million records) applying a combination of analytics which resulted in 90 GB of responsive data (**a 98% reduction**) – all in **8 days.**

This particular data source is required for multiple cases. So, the organization decided to **process it once and incrementally add to its discovery repository over time.**

Leveraging the Mindseye platform as a repository has enabled the organization to save over **\$1.6 million with its first case.** Those savings will grow over time as the repository grows, reducing the costs of re-collecting and re-processing existing data.

Can your system do that?

If your processing system can't act as a repository to leverage existing data sets, you may be wasting valuable time and resources. **Interested in seeing for yourself how your organization can benefit from a discovery repository?** Contact Mindseye at (888) 770-3876 or sales@mindseyesolutions.com for a demo.
